1. What do you think are the drawbacks of Shaastra 2016 site? It can be related to anything, for example, it may be related to UI/UX (or) performance (or) page design etc.

Answer:

- The content in Shaastra's home page (which is below) wasn't made quite visible. Although there is a button showing a downward arrow, even that wasn't quite visible.
- It would have been better we would have made a provision for people to register for Shaastra events on the website.
- The page for Events and Workshops take a lot of time to load.
- Instead of putting the home button in the dropdown menu, it would be better to put it in the navigation bar so that users can easily navigate in and out of the home page which would be more user friendly.

2. How do you think you can improve the current Shaastra website? You can list whatever feature you have felt missing and you feel it would be good if included in the site.

Answer:

- I would have created a separate page containing the schedule of Shaastra and would give brief descriptions of the events in the schedule. It can be done by having a dropdown menu to be displayed when a user clicks on the event with the dropdown menu containing the description.
- I would have provided more navigation options in the home page so that it will be easier for the users to navigate to other pages by keeping home page as a reference.
- Making the page available in regional languages like Tamil/ Hindi would help the regional people who are more comfortable in their languages to access the Shaastra page.

3. Your credentials and references (if any?)

Answer:

I've been working in CFI as a part of a project, Wall Painting Bot. I've also participated in many events in Tech-soc and Shaastra and placed 1st in the Reverse Coding event and our team placed 4th in Manual Robotics of Shaastra 2016. I've been learning HTML, Javascript, CSS recently and have been trying to improve myself in web development.
